**Assignment #2**

**March 6, 2018**

This ontology focusses on the National Hockey League (NHL) and some of the stakeholders within the league. The teams in the NHL are divided into two conferences, which are further divided into two divisions within each conference (four divisions in total). Along with the teams, divisions and conferences, the coaches and arenas that the teams play at are included in the NHL ontology. The object properties will link a coach and an arena to a team and will link the teams to their corresponding division. The four divisions will also be linked to their conference.
